

ABSTRACT

A merchandising system is disclosed. The merchandising system provides for the presentation and storage of articles comprising a base having a front and a back, the base being configured to support the articles and defining a first space for containing the articles. In addition, the merchandising system
5 comprises an assembly for advancing the articles toward the front of the base, wherein the assembly comprises a member configured to extend beyond the base to create a second space for containing the articles in addition to the first space.
